EDUCATION

University of Maryland, Baltimore County (UMBC)

Expected May 2027

B.S., Business Technology Administration | GPA 3.6 | Dean's List (4 semesters)

Relevant Coursework: Management Information Systems, Systems Analysis Methods, Advanced Business Applications, Foundations of Data Science, Applied Statistics for Business & Economics, Business Communications Systems

EXPERIENCE

MagView (Applied Software Inc.)

Fulton, MD

Development & Product Intern

July 2026 – Present

- **Founding developer:** one of two original developers of Maven, MagView's first AI voice agent: outbound calls that screen candidates, train employees, and answer company questions, with roles and flows configurable without code
- **Front end:** own the Angular 17 / TypeScript web app in MagView's Luminary design-system monorepo: subdomain routing, server-paginated data grids, and live call dashboards showing each call's status and results
- **Back end & cloud:** build ASP.NET Core / Entity Framework Core services and T-SQL migrations on Azure SQL; contributed the Azure Communication Services telephony integration connecting the web app to the live agent
- **Product:** coordinate priorities with the product manager and carry founding context into roadmap decisions as the team grew from two developers to a cross-functional group; Maven runs in production and in customer beta

Business & Data Analyst Intern

June 2026 – July 2026

- **Market research:** led an executive-commissioned study of the voice-agent concept (21 competitors, 60+ alternatives, 100-use-case matrix, 13 industries tiered) and presented a healthcare-first go-to-market plan to leadership
- **Automation audit:** audited 60+ live Freshdesk automations, surfacing logic errors, redundant rules, and hardcoded dependencies; projected 200K+ redundant notifications a year and delivered an action agenda to Support leadership
- **Training audit:** reviewed the 15-course new-hire orientation curriculum, documenting 100 content defects and delivering a chapter-by-chapter remediation report that drove 19 corrections and rebuilt training videos

Data Analyst Intern

June 2025 – August 2025

- **Data pipeline & reporting:** consolidated multi-source support-ticket exports in Excel and Power Query into analysis-ready datasets, then built KPI dashboards, pivot tables, and automated recurring reports for management
- **Regression analysis:** showed contract revenue explained only a minority of support-volume variation, shifting workload forecasting from revenue-based assumptions to activity-based data
- **Team Balance Report:** engineered a weighted utilization ratio and bubble charts that flagged accounts with outsized support use or churn risk and ranked teams by cost-efficiency and handle time

Systems Administrator Intern

September 2022 – August 2023

- **Helpdesk:** resolved IT tickets and diagnosed hardware and software issues across the company
- **Systems & assets:** managed hardware inventory in AssetTiger; supported JIRA, Freshdesk, QuickBooks, and vSphere

VOLUNTEER EXPERIENCE

Shepherd's Table | Volunteer

November 2018 – July 2024

- Prepared and served meals, managed kitchen inventory, and distributed food boxes to families during COVID-19

SKILLS & CERTIFICATIONS

Languages: C#, TypeScript, JavaScript, SQL, Java

Frameworks: .NET 8, ASP.NET Core, Entity Framework Core, Angular

Tools: Azure, SQL Server, Git, JIRA, Excel, Power Query, LLM integration (Claude, Gemini)

Certification: Cisco CCNA (2023)
